ORGANIZED BY

RemTech Europe - European Conference on remediation markets and technologies is scheduled for 22 September 2016 in the beautiful town of Ferrara, near Bologna (in the North-East of Italy).

It is promoted by **RemTech Expo**, the most important Italian event on remediation technologies (21-23 September, www.remtechexpo.com) and the European Commission's Joint Research Centre (**JRC**).

The **aim** of the Conference is to share information on knowledge, innovation and case histories, to encourage the development of remediation processes and the application of new and sustainable technologies, and to support the encounter between supplies and demands of available services and technologies, public and private. RemTech Europe will take every year a "picture" of the European market and the possible evolutionary trends.

The **themes** the Conference highlights, by involving all the leading European stakeholders, are regulations, current standards, fund raising, proven and innovative technologies, best practices introduced by some of the most important key players (public bodies and private companies). The "frontal" phase of the Conference will be followed by focused round tables with the customers and providers of services and technologies.

The **program** is planned by the RemTech Europe International Scientific Committee.

Participation is free of charge.
